MILITARY UNIFORM

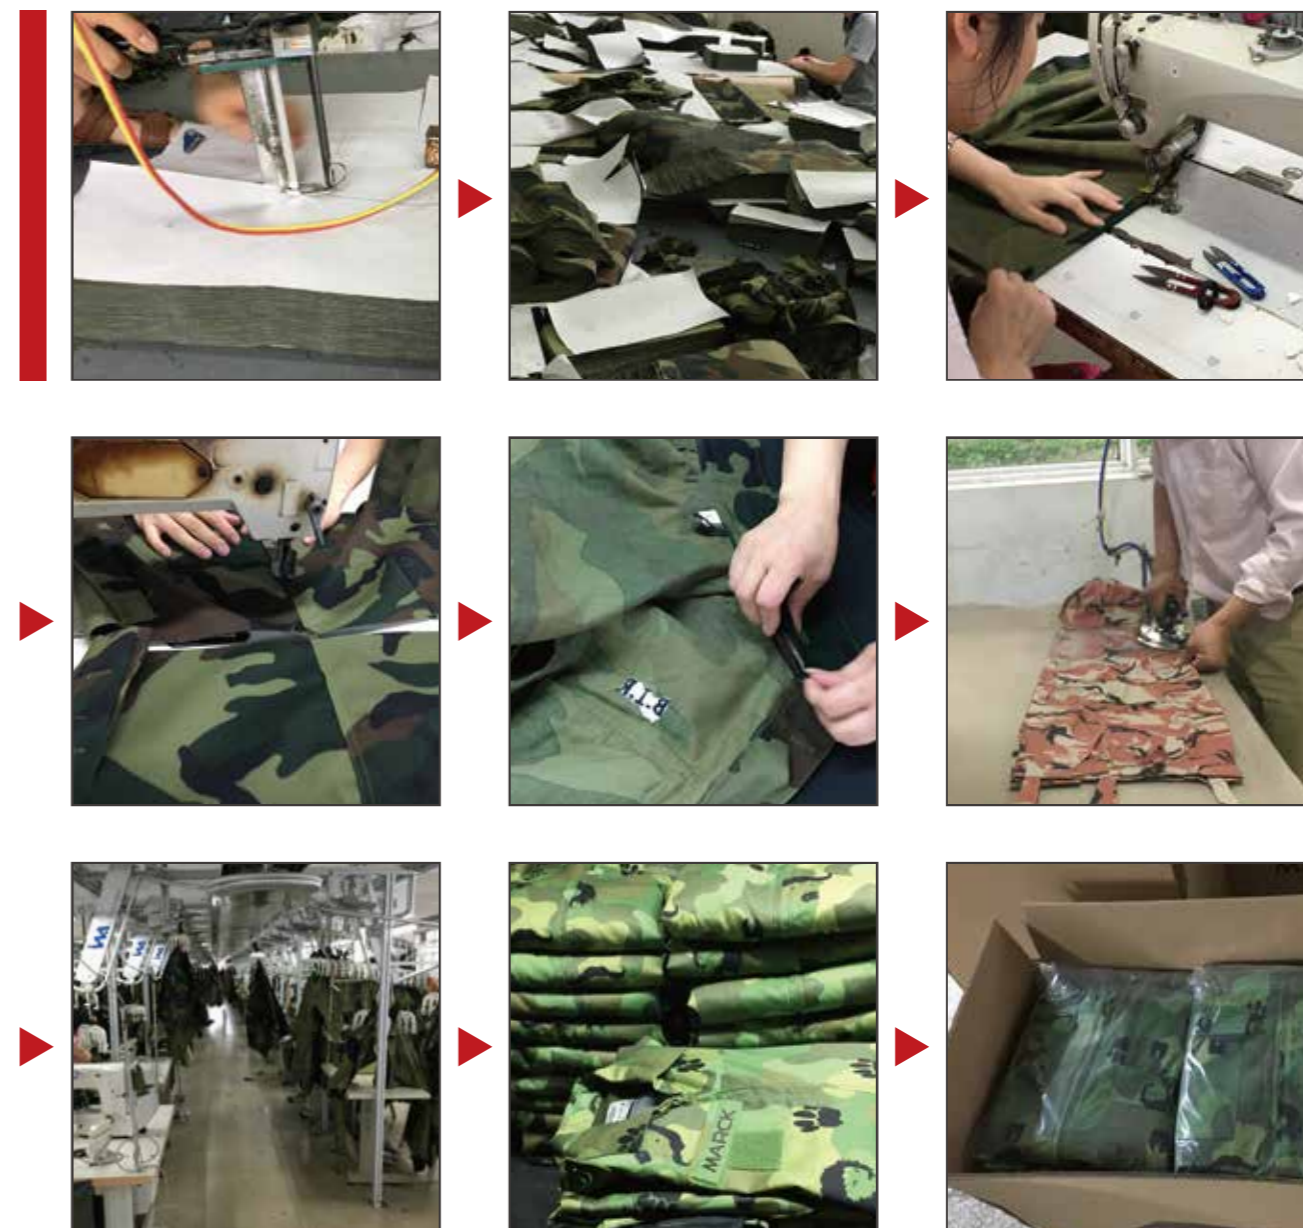

DEEKON

ABOUT US

Deekon Group manufacture top quality military uniforms, we have customers from European countries (Poland & Serbia) and South American countries (Peru & Chile). Our factory manufactures more than 2 million sets uniforms every year. Including ACU, BDU, M65 JACKET, FORG SUIT, FLIGHT JACKET, PULLOVER, RAINWEAR, and other clothing. The big production capacity makes sure we always deliver the uniforms on time. In the meanwhile, we could provide very competitive price because of refined production management.

We have 550 machines, 600 workers. Every year we can produce 2,000,000 sets clothes. The big production capacity ensure we always deliver the goods on time. From the material to the production process, every step is under our strict control. This ensure our high quality and lead time. Working with a team of highly creative designers and having access to modern manufacturing equipment and facilities, we are at a favorable position to offer customers all-inclusive OEM service and customized goods.

DK-MU-001 DESERT ACU

ACU is known as Army Combat Uniform or Airman Combat Uniform, it combines with different Camouflage Patterns and Colors, making soldiers available to blend into the landform on the battlefield to avoid being discovered by the enemy, protecting soldiers from casualties.

DEEKON

DK-MU-056 WOODLAND M65

The jacket was introduced into U.S. military service in 1965 to replace the M-1951 field jacket which was an improvement on the M-1943 field jacket of World War II design.[4] It has a built-in hood that can be rolled up and fits into a pouch on the back of the neck as opposed to the separate hood that attached to the M-1951.

The jacket is a lined hip length design, having a bi-swing back; a fly front closure secured by a zip and snap fasteners. It has two piece set-in sleeves (with adjustable cuffs and hand shield extension) and a convertible stand-up collar. The collar has an adjustable tab closure, secured with loop fastener tape and a horizontal zip fastener closure on the under-collar, which acts as the exit for the built-in hood. The built-in hood has a single draw-cord adjustment, and, when not in use, is concealed between the jacket outer shell and fabric liner.

The jacket has two bellows type breast pockets and two lower inside hanging pockets all with flap closures secured by snap fasteners. The specification (revision K) requires pieces of loop fastener tape in the following positions for insignia: at top of each sleeve for placement of patches; on the right and left sides of the chest directly above the breast pockets for name-tape and U.S. Army tape and a piece of loop fastener tape for the rank centred between the second and third snap fastener on front flap. There are also pieces of fastener tape on the collar tab, under-collar, sleeve tabs and outside of underarm.

On the inside of the jacket there are buttons for attaching the insulating liner in cold weather. It has open underarms, buttonholes at the neck and front edges, and buttonhole tabs at the sleeve bottoms for attaching the liner to the jacket. The liner is quilted and made of polyester batting covered with 3 plies of ripstop nylon cloth.

The combat shirt closely resembles the Marine Corps Combat Utility Uniform, but the portion covered by the Marine's body armor (such as the Outer Tactical Vest or Modular Tactical Vest) is not as highly reinforced due to the protective qualities of the vest, and to prevent discomfort. There are pockets only on the upper sleeve.

The combat trousers also closely resemble the utility uniform, but there is an additional calf-pocket to help distinguish it from non-FROG trousers.

The gloves are designed to be highly durable.

DK-TS-010 LONG SLEEVE SHIRT

A shirt is a cloth garment for the upper body (from the neck to the waist).

Originally an undergarment worn exclusively by men, it has become, in American English, a catch-all term for a broad variety of upper-body garments and undergarments. In British English, a shirt is more specifically a garment with a collar, sleeves with cuffs, and a full vertical opening with buttons or snaps. A shirt can also be worn with a necktie under the shirt collar.

DK-TS-021 POLO SHIRT

A polo shirt is a form of shirt with a collar, a placket neckline with typically two or three buttons, and an optional pocket. Polo shirts are usually short sleeved. Polo shirts are usually made of knitted cotton, usually a Piqué knit, or less commonly an interlock knit, or using other fibers such as silk, merino wool, synthetic fibers, or blends of natural and synthetic fibers, which made polo shirt to be durable and and up to any challenge.

DEEKON

DK-MTS-005 T-SHIRT

The T-shirt evolved from undergarments used in the 19th century and, in the mid-20th century, transitioned from undergarment to general-use casual clothing.

T-shirt is a style of fabric shirt named after the T shape of its body and sleeves. Traditionally it has short sleeves and a round neckline, known as a crew neck, which lacks a collar. A V-neck T-shirt has a V-shaped neckline, as opposed to the round neckline of the more common crew neck shirt (also called a U-neck).

T-shirts are generally made of a stretchy, light and inexpensive fabric and are easy to clean. Typically made of cotton textile in a stockinette or jersey knit, it has a distinctively pliable texture compared to shirts made of woven cloth.

DK-MP-019 SWEATER

A sweater, also called a jumper or pullover, is a piece of clothing, typically with long sleeves, made of knitted or crocheted material that covers the upper part of the body. When sleeveless, the garment is often called a slipover. Sweaters were traditionally made from wool but can now be made of cotton, synthetic fibers, or any combination of these.

Military commando sweater is a favorite among police officers, paramedics, and security professionals. Featuring a durable material construction, this kind sweater will not only keep you warm while you're on the job but will last you a long time no matter how tough things get on duty.

DK-MJ-001 FLIGHT JACKET

A flight jacket is a casual jacket that was originally created for pilots and eventually became part of popular culture and apparel.

Today, flight jackets are usually associated with the MA-1, a now-obsolete U.S. military jacket, which is mostly found in sage green. It is made with flight silk nylon and usually has a blaze orange lining, with the specification tag in the pocket, though earlier models had a sage-green lining and the specification tag on the neck area. It has two slanted flap pockets on the front, two inner pockets, and a zipped pocket with pen holders on the left sleeve. The lighter weight version of the MA-1 is known as the L-2B flight jacket, which in turn, replaced both the original L2 and L2A jackets, which all three differentiate from the MA-1 as they have snap-down epaulets and no inside pockets.

DK-MCU-009 FULL DRESS UNIFORM

Full dress uniform or parade dress uniform is the most formal type of uniforms used by military, police, fire and other public uniformed services for official parades, ceremonies, and receptions, including private ones such as marriages and funerals. Full dress uniforms typically include full-size orders and medals insignia. Design may depend on regiment or service branch, e.g. army, navy, air force, marines, etc.

DK-MR-001 RAINWEAR

A rainwear or slicker is a waterproof or water-resistant coat worn to protect the body from rain. The term rain jacket is sometimes used to refer to raincoats that are waist length. A rain jacket may be combined with a pair of rain pants to make a rain suit. Modern raincoats are often constructed of breathable, waterproof fabrics such as Gore-Tex or Tyvek. These fabrics allow some air to pass through, allowing the garment to 'breathe' so that sweat vapour can escape.

DK-MC-001 COVERALLS

A boilersuit (or boiler suit), also known as coveralls, is a loose fitting garment covering the whole body except for the head, hands and feet.

Coveralls are most often worn as protective clothing over "street" clothes at work. They can be used for painting and decorating, mechanical work, farming, factory work, and other activities where clothes may become soiled. Many companies provide workers with corporate branded boilersuits for identification and marketing.

★ SPECIFICATIONS

- > MATERIAL:
POLYESTER 65% / COTTON 35%
- > WEIGHT:
200GSM
- > WEAVING TYPE:
Twill
- > COLOR:
NAVY BLUE

A boilersuit is a one-piece garment with full-length sleeves and legs like a jumpsuit, but usually less tight-fitting. Its main feature is that it has no gap between jacket and trousers or between lapels, and no loose jacket tails.

It often has a long thin pocket down the outside of the right thigh to hold long tools. It usually has a front fastening extending the whole length of the front of the body up to the throat, with no lapels. It may be fastened with buttons, a zip, velcro, or snap fasteners. Boilersuits with an attached hood are available.

BULLETPROOF

DEEKON

ABOUT US

Deekon Group Co., Ltd, has been researching and manufacturing bullet proof and ballistic material since 2008. We are a fully vertically integrated manufacturer converting the raw fibre into bullet and fragmentation resistant material and so have great flexibility and expertise producing a wide range of body armor, ballistic helmets, vehicle protective plates and armor plate inserts.

Helmet

Our factory of 150,000 square metres employs 300 workers. We have our own ballistic film/fibre extrusion, ballistic material assembly/cutting, helmet hot mould and hard plate pressing lines, so we can manufacture right from the raw material to the finished product. This enables us to ensure consistent quality through the manufacturing process and gives us great flexibility to produce products to our customers' precise requirements.

We also regularly use independent testing agencies to ensure our products reach and surpass NIJ standards in every category so please contact us for more information.

Bulletproof vest

With 3 Production Lines, 80 Machines, 150 Workers, 300,000 Sets Yearly Production. The big production capacity makes sure we always deliver the vests on time. And we carry out all our manufacturing processes and have emerged as the ultimate destination for all kinds of clothes and customized needs at competitive prices

Working with a team of highly passionate and creative designers and having access to modern manufacturing equipment and facilities, we are at a favorable position to offer customers with all-inclusive OEM and private label clothing services.

DK-BHF (FAST HELMET)

The Future Assault Shell Technology (FAST) Helmet, also known as the FAST helmet, is a combat helmet that is used by special forces units seeking to use an alternative headgear while trading some ballistic protection for comfortable headwear to use.

FMA MICH HELMET HANGING SYSTEM ACH RETENTION STRAP SUSPENSION SYSTEM H-NAPE MATERIAL: HIGH QUALITY NYLON. WEIGHT: 90G COMPATIBLE WITH: MICH HELMET. COLOR: BLACK, DARK EARTH PACKAGE:MICH HELMET RETENTION SYSTEM H-NAPE SET * 1 (NOT INCLUDE HELMET) SPECIAL NYLON DESIGN WITH AIR PERMEABILITY AND DURABILITY. DEVELOPED TO IMPROVE SAFETY, COMFORT AND STABILITY OF CHINSTRAPS USED IN MICH/ACH HELMETS.

EVERY COMPONENT, DOWN TO EACH STITCH PATTERN, WAS DESIGNED SPECIFICALLY FOR THIS PURPOSE, GIVING THE ACH GREATER UTILITY THAN EVER BEFORE. CUSTOM ADJUSTMENT TABS ALLOW THE HELMET TO BE ADJUSTED WHILE WEARING IT, WITHOUT ANY HANGING LOOSE ENDS. PADDED PROTECTIVE LEATHER CHIN CUP AND NAPE PAD. SIMPLIFIED STRAP GEOMETRY MAKES THE SYSTEM 3X MORE STABLE THAN EXISTING CHINSTRAPS.

BULLETPROOF HELMET WITHOUT PAINTING

BULLETPROOF STEEL

Bulletproof steel is the first material used to make bulletproof helmets. It's harder and stronger than ordinary steel, and much cheaper than Kevlar and PE, but much weaker than Kevlar and PE in bulletproof capability. In addition, a bulletproof steel helmet is usually heavy and uncomfortable to wear.

Therefore, when buying a bulletproof helmet, we should make a right choice on material according to the use situation and the actual needs.

MATERIAL

With the rapid development of material science from the late 20th century to the 21st century, a variety of materials for making helmets have been developed. As these materials all have their own unique characteristics, helmets made of different material require different environmental conditions during their use and preservation, which should be taken into consideration when choosing helmets.

Now, there are mainly three materials for making helmets, PE, Kevlar, and bulletproof steel.

KEVLAR

Aramid, also known as Kevlar was born in the late 1960s. It is a new high-tech synthetic fiber with strong high-temperature resistance, great anticorrosion, light weight and great strength. Thus Kevlar helmet is the mainstream equipment in the US Army and European army.

However, Kevlar helmet also have shortcomings: vulnerable to ultraviolet light and easy to hydrolyze. It's not suitable to use or store in the environment with strong ultraviolet light and high humidity for a long time. Besides, the increase of the usage of Kevlar has pushed up the price of Kevlar's raw materials and then the price of Kevlar helmets.

PE

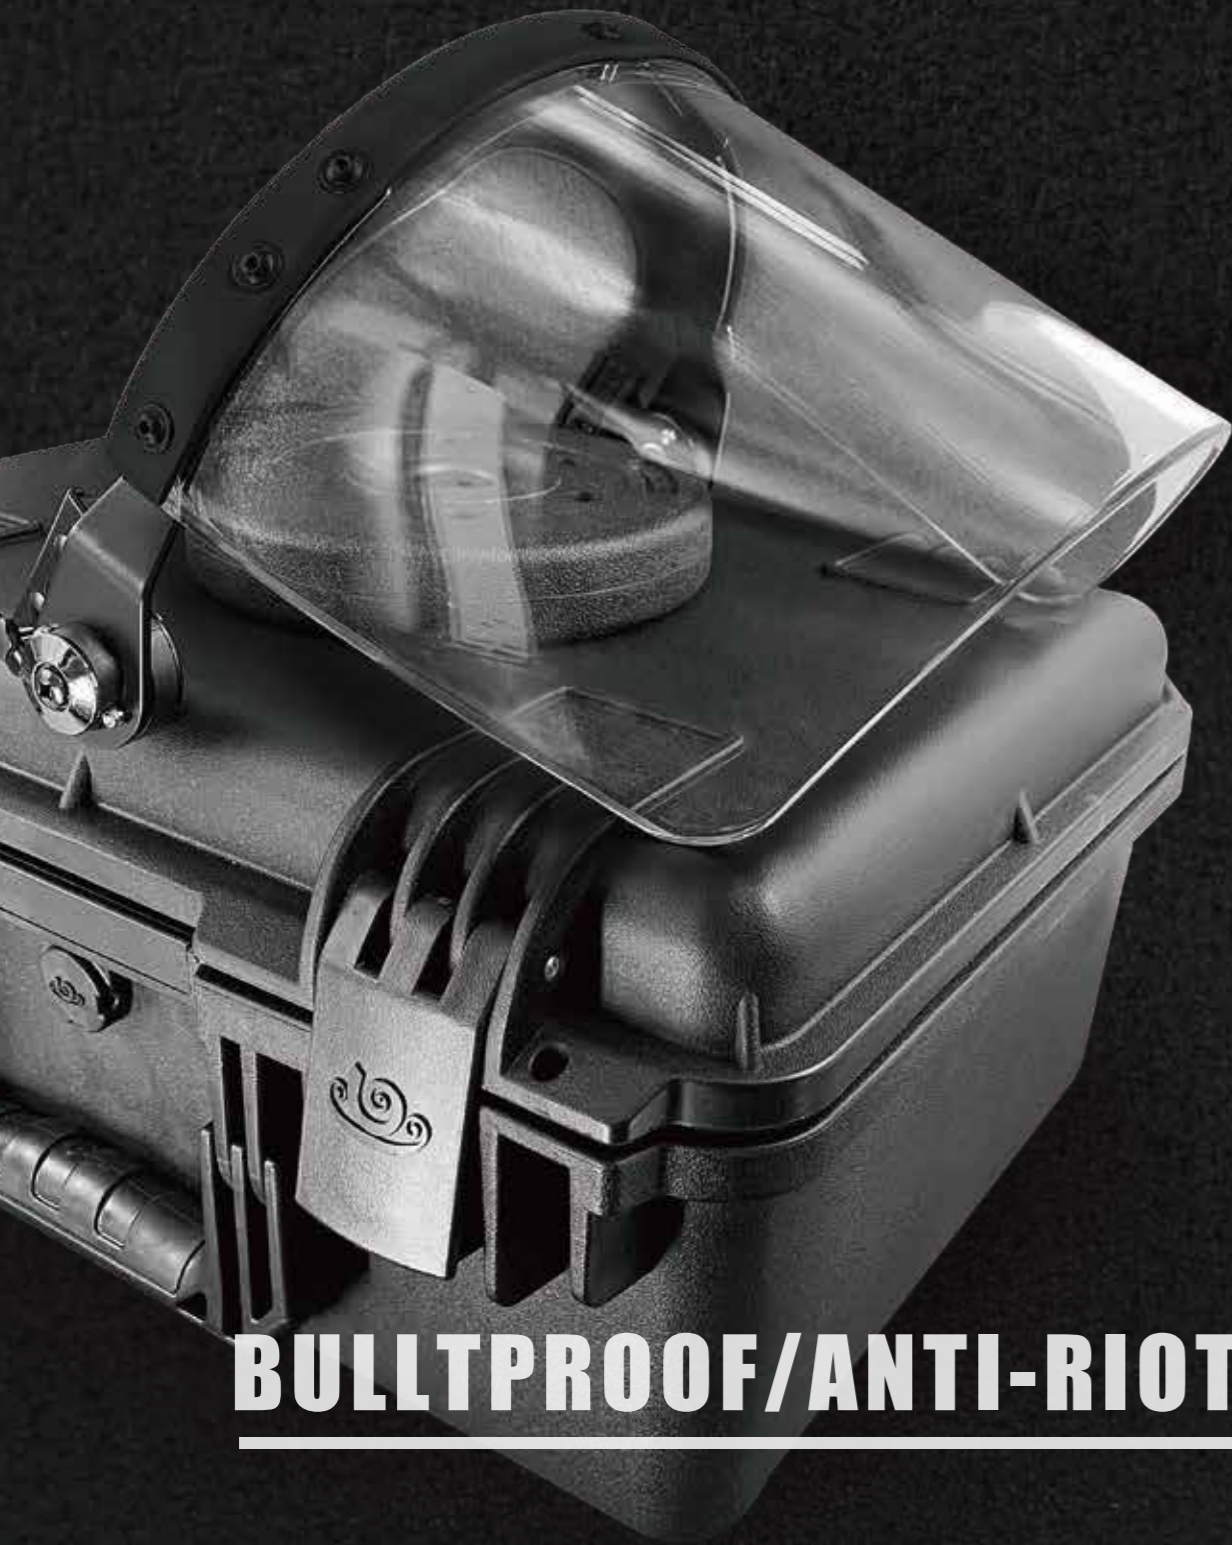

PE here refers to UHMW-PE, the abbreviation of ultra-high molecular weight polyethylene. It is a high-performance organic fiber developed in the early 80s of last century. It has great ultra-high stability, low temperature resistance, and water resistance, which makes the maintenance of PE bullet-proof products more convenient; but it also

has some a few drawbacks. For example, it is vulnerable to high temperature, and doesn't resist creep as well as Kevlar. Due to its poor creep resistance, it cannot be used under high pressure for a long time. But compared with Kevlar helmet, it is lighter in weight and much cheaper.

DK-CT (CERAMIC TILES)

Aluminium oxide is a chemical compound of aluminium and oxygen with the chemical formula Al_2O_3 . It is the most commonly occurring of several aluminium oxides, and specifically identified as aluminium(III) oxide. It is commonly called alumina and may also be called aloxide, aloxite, or alundum depending on particular forms or applications.

★ SIC

Sintered silicon carbide (SiC) ceramic is a new kind of bulletproof ceramic material, with low density, high strength, high hardness, high temperature resistance, oxidation resistance, corrosion resistance and other excellent performances. Now it's more and more preferred to be the bulletproof ceramic pieces. The sintered silicon carbide ceramics we produced is made of purity sub-micron silicon carbide powder according to the advanced formula imported from abroad. It's produced out after spraying granulation, pressure molding and sintered in the high temperature vacuum. As the structure inside is compact, small grains, the bulletproof performance of this product is superior. The ballistic insert plates made of our silicon carbide can reach the standard of NIJ0101.06III, IV, GA141-2010-V, BR-V, etc. proofed by shooting test for many times.

DEEKON

ABOUT US

DEEKON GROUP CO., LTD has many years' experience of developing, manufacturing, exporting. Our group regards product quality as life, established a perfect quality assurance system and by the science and technology as the forerunner, tactical products of the research and development have accumulated rich experience, has a unique advantage. In the past years, we formed a long-term and stable cooperation with many clients from Europe, South America, Africa, Middle East and Asia.

Regarding the tactical vests, is usually durable/lightweight/comfortable, as it's made of Polyester or Nylon. The lightweight design minimizes fatigue without compromising protection and putting on and taking off the vest is easy because it comes with adjustable buckles on the sides. The best advantage of tactical vests is that you get additional storage to keep your important stuff for adventure. You can store things like your radio and ammunition in easy reach.

In the past years, we formed a long-term and stable cooperation with many clients from Europe, South America, Africa, Middle East and Asia. And we will provide you the best reasonable price and one-stop solution.

BAGS AND BACKPACK

DEEKON

DK-MB-002 MILITARY BACKPACK

Backpacks are the main equipment used to carry supplies. They are essential and important equipment for soldiers. When people talk about the word "soldier," the image of a soldier who is wearing a helmet, carrying a heavy backpack, wearing camouflage uniforms and military boots, and holding a rifle fighting on the battlefield is the first thing that comes to mind. With the changes in the needs of the war environment, as well as the application of technology such as material technology and ergonomics in the field of military equipment, military backpacks in different periods have their distinctive characteristics of the times.

Deekon Tactical backpacks have very good performance in the durability, toughness and molle system. With different materials and accessories, we can meet various requirements from customers all over the world.

DK-MB-050 HYDRATION PACKS

Hydration packs are backpacks with built-in water storage reservoirs or bladders and an easy access drinking tube and bite valve that allows you to conveniently take a sip of water whenever the need arises, without having to stop or even slow down. Hydration packs are extremely useful for recreational activities and sporting activities where hands-free style is best. A small hydration pack can be worn while walking, trekking, running, riding a mountain bike and most other activities.

DK-MB-001 ALICE PACK

Alice Pack is short for All-Purpose Lightweight Individual Carrying Equipment. ALICE is an equipment attachment system and accessory set officially adopted by the military in 1973. The ALICE pack has since been phased out of military service, but lots of people still prefer this method of carry. ALICE packs were designed as a two-component system. Firstly, the belt system, with entrenching carrier, two small cases, canteen cover and suspenders. Secondly, the elements comprising the bag itself which include the cover, bag and frame.

One of the main advantages of the ALICE system is its ruggedness. This pack is capable of carrying large loads and have the added benefit of being moisture resistant (not necessarily waterproof). There are no zippers to break, allowing for some serious gear stuffing. If you're going on a big hike, these should definitely be considered! ALICE packs can be used with or without a frame but the external frame definitely helps balance the load – otherwise, these packs get pretty centre-fat. But, essentially lots of gear that's able to be stuffed in one bag, is pretty handy.

HEADWEAR

DK-BC-011 BERET

Beret is a soft, round, flat-crowned hat, usually of woven, hand-knitted wool, crocheted cotton, wool felt, or acrylic fiber.

Berets are worn as part of the uniform of many military and police units worldwide, as well as by other organizations. Military berets are usually pushed to the right to free the shoulder that bears the rifle on most soldiers, but the armies of some countries, mostly within Europe, South America and Asia have influenced the push to the left. In some countries, berets are associated with elite units, who often wear berets in more unusual colors.

DK-MPC-001 PEAKED CAP

The peaked cap, service cap, forage cap, barracks cover or combination cap is a form of headgear worn by the armed forces of many nations, as well as many uniformed civilian organizations such as law enforcement agencies and fire departments.

Other principal components are the crown, band and insignia, typically a cap badge and embroidery in proportion to rank. Piping is also often found, typically in contrast to the crown color, which is usually white for navy, blue for air force and green for army. The band is typically a dark, contrasting color, often black, but may be patterned or striped.

DK-BH-001 BONNIE HAT

Bonnie Hat (boonie hat) or booney hat, also known as giggle hat, is a form of wide-brim hat commonly used by military forces. Its design is similar to a bucket hat but with a stiffer brim. Often a fabric tape band of "branch loops" is sewn around the crown of the hat. This 'foliage ring' is meant to hold additional vegetation as camouflage. A strap provides stability. The crown may be vented with eyelets or small mesh panels.

TACTICAL BELT

DEEKON

DK-MTB-072 MILITARY TACTICAL BELT

Deekon Military belt is made of strong webbing and marketed to military, police, and other tactical use, with some connotation of configurable gear depending on the application. A belt usually is part of a soldier or police officer's uniform. Various bits of gear can be added or removed for mission-specific uses. Those various bits of kit could include things like mag carriers, a radio, handcuff case, a canteen, and so on and so forth. Deekon military belt can be divided into three types according to its using environment: Military belt, Police Belt and Tactical belt.

GN002 COMBAT BOOTS

Combat boots are military boots designed to be worn by soldiers during combat or combat training, as opposed to during parades and other ceremonial duties. Modern combat boots are designed to provide a combination of grip, ankle stability, and foot protection suitable for a rugged environment. They are traditionally made of hardened and sometimes waterproof leather.

MILITARY OUTDOOR

DK-MSB-003 MILITARY SLEEPING BAG

Deekon Group Co., Ltd is a leading manufacturer specializing in canvas tents, like Bell Tent, Military Tent, Relief Tent, etc., which are suitable for all army camping and hospital emergency. Our products are specifically designed to endure the daily abuse of a rental environment. All of our tents are constructed with durable high-quality materials, both on fabrics, frames and on spare parts. Each tent is tailored according to your special requirements and also your budget to make sure everything is exactly as you would wish. We pride ourselves on offering the excellent, personalized service that our customers should expect and deserve. We are able to concentrate on the attention to all the details in your requirements, whether it's tiny or not. Our aim is to provide high quality marquees along with a helpful and friendly service to make sure all events or occasions could be arranged as stress free as possible.
